## Color-Changing Yarn

Color-changing yarn is a new type of intelligent functional fiber developed by embedding the latest photochromic material on the basis of biomass fiber. The fiber can instantly change from colorless to colored or from colored to another color under the irradiation of sunlight or ultraviolet rays; when the irradiation is stopped, the fiber returns to its original color.

- ♥ The yarn can be used to make high-end embroidery thread, and the embroidery patterns can show brilliant colors with the change of light.
- ♥ Brand clothing can use the yarn to make anti-counterfeiting logos.
- ♥ It can be made into high-end curtains, and the curtains will automatically adjust the light transmittance according to the intensity of the day and night light.
- ♥ Incorporating this yarn into the checkered fabric used for high-end shirts and T-shirts, the appearance of the clothes produced will change with the changes of light in different places, novel and unique, eye-catching.
- ♥ The yarn can be used to make imaginary silk scarves, which are gorgeous and luminous.  
This yarn is also suitable as a material for military special protective stealth clothing.  
This yarn is also suitable as a material for military special protective stealth clothing.
- ♥ The yarn can be used to make fabrics for primary and middle school students and children's clothing, and it can also be used to embroider cartoon patterns, which is innocent and dynamic.
- ♥ This yarn is also suitable as a material for military special protective stealth clothing.
- ♥ This is also an ideal material for sportswear specifications and outdoor travellers. It absorbs ultraviolet rays and has a good protective effect on the skin.
